Abstract (en)

[origin: WO2013102644A1] The invention relates to a process for producing beer by the high-gravity blending process, comprising at least the process steps brewing the beer, filtering the beer and packaging the beer into containers, wherein, after the process step of filtering, a process step of high-gravity blending is carried out. In order to simplify the production of beer after filtration and thereby reduce the costs, it is proposed that the process step of high-gravity blending takes place immediately before the process step of packaging the beer into containers.
