Abstract (en)

[origin: WO2013102726A1] The invention relates to an electrical power circuit breaker having a power battery and an indicator device that comprises an indicator lever (41) having an indicator light (39), and a cam (42) for indicating the activated and inactivated states of the activating mechanism. The indicator cam (42) is mounted onto the activating shaft (29) near the charging cam (28), and has a notch (43) for receiving the indicator lever (41) when the mechanism is in the charged state. The indicator cam (42) comprises a single bar for gradually positioning the indicator lever (41) up to said notch (43) so as to ensure the locking of the opening latch (26) that is kept in a tripped position by means of the auxiliary shunt trip (MX).
