Abstract (en)
[origin: CN104141203A] The invention relates to a method for generating sewing control data for processing a sewing program, during which a seam is sewn, the method including the following steps: dividing the seam into a plurality of parameter seam sections; arranging at least one assignment seam position on the seam; assigning at least one assignment sewing parameter value to the assignment seam position; detecting the at least one assignment seam position with seam section thereon; for the seam section with at least one assignment seam position thereon, assigning the sewing parameter value to the seam section according to the assignment seam position on the currently considered seam section; and for the condition of a plurality of assignment seam positions on the same seam section, forming the assignment sewing parameter value for the seam section by combination of the assignment sewing parameter values.
