Abstract (en)
[origin: WO2014180626A1] The invention relates to a transmission (12) for actuating an operating rod (16), an operating rod device (14) having an operating rod (16) and an assembly (10) which has a transmission (12) and an operating rod device (14). The transmission (12) has a transmission piece (80), which can be actuated by an actuating element, and an operating rod coupling element (34), which can be driven at least indirectly by the transmission piece (80) and which can be coupled to a corresponding transmission coupling element (32) of an operating rod (16), wherein the operating rod coupling element (32) defines a point of rotation around which an operating rod device (14) having the operating rod (16) can be rotated from an assembly position up to a stop in an end position in order to connect the operating rod (16) to the transmission (12).
