Abstract (en)

[origin: WO2013104691A1] The invention relates to a detection system designed to obtain information, in particular data, belonging to at least one tubular element (10), wherein several tubular elements can be connected to one another to form a tubular network (10, 12, 11, 13), such as a sewer system, a supply line system, or a ventilation line system, wherein the detection system comprises at least one aircraft (14), by means of which information can be detected inside the at least one tubular element (10). The invention further relates to a method for detecting information, in particular data, belonging to at least one tubular element by means of an aircraft in the tubular element.
