Abstract (en)
[origin: EP2615504A1] The movement has a motor unit (2a) and a set of regulating elements (5a, 5c) including a set of beams (9a, 9c). A connection unit (1) connects the motor unit to the regulating elements. Axes (12a, 12c) of the beams are approximately orthogonal with each other and secant. Another set of regulating elements (5b, 5d) includes a set of beams (9b, 9d), and is connected to the motor unit by the connection unit, where axes (12b, 12d) of the latter set of beams are orthogonal with each other and not parallel with the axes of the former beams.
