Abstract (en)
PROCESS FOR DEHYDRATING MORINGA OLEIFERA, comprising: cutting the branches of Moringa oleifera in small bunches (2) and, within 1 hour, carrying them to a dehydration chamber (1); in said chamber, placing them in containers (3) with the base and side walls in the form of a grille (3a); arranging the containers forming shelves (5) with space among the containers (3) so that the small bunches (2) don't get crushed; arranging the shelves (5) aligned so as to form among them, at least, an air channel (6); the chamber is a clean, dark, and airtight room with, at least, a heater (7), a dehumidifier (8) and fans (9) which force heated air to pass through the mentioned channel (6) at a temperature not exceeding 40°C; periodically, as a function of the humidity build-up, renewing the air within the drying room, and replacing it by new and dry air.
