Abstract (en)

[origin: WO2013105077A1] The invention relates to the field of units for showcasing and storing objects. In particular, the invention relates to such a unit that allows the frontmost object to be replaced simply and without the use of tools. The unit according to the invention comprises a frame (20) which is assembled from directly adjoining strips (21A, 21B, 22A, 22B), which is open on at least a first access side (1), and the nominal frame widths (25A, 25B) of which slightly exceed the nominal widths (IIA, IIB) of the flat objects (10, 10'), such that the flat objects (10, 10') can be placed within the frame (20), wherein at least two opposite strips (21A, 21B / 22A, 22B) are designed as retainer strips (21A, 21B) which have a retainer profile (23A, 23B) that defines a nominal retainer width (28A, 28B), and the remaining strips are designed as continuous strips (22A, 22B) which reduce the corresponding nominal frame widths (25B / 25A) only insignificantly or not at all, and wherein the unit also includes a means for fixing (30) at least one of the outermost objects (10') in place, wherein said means can be or is inserted in the frame. A method is also disclosed which makes use of the unit according to the invention.
