Abstract (en)
[origin: WO2013109627A1] An improved stovetop grilling device includes a grilling surface, a catch tray and a heat conducting element. The grilling surface has a plurality of upward pointing V-shaped first members. The first members are attached at first and second ends to a first supporting frame. Adjacent pairs of their side edges are spaced apart by a first distance. The catch tray has a plurality of downward pointing V-shaped second members. The second members are attached at their first and second ends to a second supporting frame. Adjacent pairs of their side edges are spaced from one another by the first distance. The first supporting frame is located over the second supporting frame such that drippings from the grilling surface fall into the catch tray. The heat conducting element has a plurality of upward pointing planar third members that extend upwardly between the second members and contact undersides of the first members.
