Abstract (en)

[origin: CA2870465A1] A panelling element (16) for lining the inside of a side wall of a rail vehicle has a plate-shaped base body (30a) and an angled strip element (32a) which extends essentially parallel to an end side (34a) of the base body (30a) and which is embodied in one piece with the base body (30a), wherein the base body (30a) and the strip element (32a) form a receptacle (42a) in which a connecting element (22) can be accommodated, by means of which connecting element (22) the panelling element (16) can be connected to the inside of the side wall. As a result, the panelling element (16) can be easily and cost-effectively attached in a secure fashion to the inside of the side wall of the rail vehicle.
