Abstract (en)

[origin: WO2013107700A1] A vessel (28) comprising a hull (19) and a compartment (20) with an opening (29) in the hull has a davit device (26) for a boat (18) and means for moving the davit device between a first position where the boat is located inside the compartment and a second position where the boat is located outside the compartment and the opening (29). The opening comprises a closing element (17) and the davit device (26) comprises at least one activation device (1, 15, 31) for the closing element. The activation device is arranged to open the closing element when the davit device is moved to the second position and to close the closing element when the davit device is moved to the first position.
