Abstract (en)
[origin: WO2013108021A2] A modular access flooring system comprising a plurality of reversible floor panels, each panel having a first and second surface suitable for orientation in an uppermost facing direction to provide the floor surface of the modular system. A plurality of support pillars provide elevated support of the floor panels via respective pillar heads. Correct alignment of the floor panels is achieved via a spacer projection extending upwardly from each pillar head and about which the floor panels may be arranged to form a tessellated modular flooring system.
