Abstract (en)

[origin: WO2013156068A1] The invention relates to a method for monitoring an operational state of a slide bearing (12) comprising the following steps: determining measurement values (S18) that characterise noise emissions in the slide bearing (12) by means of a sensor element (22) which is mechanically coupled to the slide bearing (12); calculating a characteristic value using the determined measurement values (S20); and classifying the operational state of the slide bearing (12) according to the characteristic value (S24).
