Abstract (en)

[origin: CN104183969A] The invention relates to a protective cover arranged on a multi-pin connector member. The protective cover comprises a first housing part, a second housing part designed as a cover element, a first opening for wires secured to a plug-in element to pass through, and a second opening for wires secured to the plug-in element to pass through, wherein the first opening extends on the first housing part and the second housing part, and the second opening extends on the first housing part and the second housing part. When the protective cover is installed on the multi-pin connector member, the first opening is directly adjacent to the plug-in element, and the second opening and the first opening are formed at an interval; and an included angle between a plane expanded through the first opening and a plane expanded through the second opening is between 40 DEG and 90 DEG, and preferably an included angle between 50 DEG and 80 DEG is formed.
