Abstract (en)

[origin: WO2013111069A1] A glass sheet (2) advanced in a longitudinal direction (15) is ground by displacing a first (14) and a second grinder (14) equal to each other in respective directions transversal to the longitudinal direction between respective backward grinder change/maintenance positions and respective forward grinding positions of said sheet (2), grinding the sheet (2) keeping the first grinder in its forward grinding position and bringing the second grinder to a standby position arranged between the relative backward and forward grinding positions and close to the relative forward grinding position while grinding the sheet (2) by means of the first grinder (14).
