Abstract (en)

[origin: WO2013110626A1] Known textile flat structures contain precious metal wire or they are composed completely thereof. In order to achieve high flexural and tensile strength with, at the same time, high flexibility of the flat structure, it is proposed according to the invention that the precious metal wire is configured as a precious metal cord (1) which comprises a plurality of braids (3) or a plurality of individual precious metal wires (2) or a combination of braids and individual precious metal wires which are in each case laid around one another and/or twisted around one another.
