Abstract (en)  
[origin: WO2013110586A1] A strip-light luminaire has a support rail (2), which extends along a longitudinal axis (L), and a light source, arranged on the support rail (2), for emitting light downwards. Provision is furthermore made for at least one light-emitting module (3, 3', 3'') for emitting light upwards and an electric conductor element (4) for supplying the at least one light-emitting module (3, 3', 3'') which extends along the longitudinal axis (L) with power, wherein the at least one light-emitting module (3, 3', 3'') comprises holding means (5) for holding the at least one light-emitting module (3, 3', 3'') on the support rail (2).
