Abstract (en)

[origin: WO2013110745A1] The assembly comprises: a cell flange (6); a cell door (16) connected to the cell flange (6) by a suitable mechanical connection; a filling gasket (64) having a point; a container flange (22), connected to the cell flange (6) by a bayonet connection; a sealing gasket (60) on the container flange (22); a container door (26) that can be fixed to the container flange (22) by a bayonet connection, the container flange having protruding lugs (32); a bayonet connection between the cell door (16) and the container door (26) allowing the two doors to be joined together via the cell door seal (64), avoiding any risk of contamination by the volume between the doors (16, 26) when the double door is opened into the interior (4) of the cell. The lugs (32) of the container flange (22) are made of an anti-friction material.
