Abstract (en)

[origin: EP2808461A1] A roof window with a ventilation passage (52) provided between a frame top covering member (41) on the frame top member (11) and the sash top member (21) and a diversion member (6;106) provided between the pane (3) and the frame top covering member (41). The diversion member has a first portion (61), which is attached directly or indirectly to the sash top member (21), and a second portion (62) projecting from the first portion in a direction away from the frame top member and the pane. The second portion of the diversion member covers for the ventilation opening (51) when seen in a direction (A) parallel to the pane, but leaves an opening when seen in a direction (B) perpendicular to the pane. The second portion of the diversion member (6;106) preferably has the shape of a gutter and locking members (9;109) may be used for retaining the diversion member.
