Abstract (en)  
[origin: CN104217476A] An electronic key (1; 101) comprises a functional body (6; 106) used for accommodating electrical and electronic components and forming a shell and at least one button member (5; 105) on the functional body (6; 106). With a simple design, the electronic key is provided to ensure a better comfort and at the same time simple and trouble-free operation. This is achieved in that a cover (2; 102) by means of a locking mechanism (14; 114) can be locked on the functional body (6; 106) releasably, and can cover at least the upper side (7; 107) and / or the bottom (8; 108) of the function body (6; 106).
