Abstract (en)
[origin: EP2808954A1] The terminal (100) formed of an electrically conductive plate, including a first support part (11) and a second support part (12) disposed facing each other such that the first and second support parts (11; 12) sandwich a printed circuit board (200) to make contact with opposite surfaces of the printed circuit board (200), is characterized in that the second support part (12) is comprised of a portion of the plate expanding in a first direction intersecting with a second direction in which the printed circuit board (200) expands, and the second support part (12) is formed with a recess (12a) opening in the second direction.
