Abstract (en)  
This invention is a device or module with a LED-type lamp of compact dimensions in order to be used in different illumination industries, such as the automobile, signaling or architectonic industries. The module includes elements for its easy and fast attachment, an efficient manufacturing as from a single plate and structures for the structural support and for heat diffusion. It can be directly attached in an application or in an insulation material support. Likewise, it has two different types of connections that may be used independently or jointly depending on the application.
