Abstract (en)
[origin: WO2013113337A1] The invention relates to a shoe (1), in particular a sports shoe, that has a shoe upper part (2) and a sole (3) which is connected to the shoe upper part (2), the shoe upper part (2) and the sole (3) being connected to one another by means of a connecting element (4). In order to simplify the connection between the shoe upper part and the sole and in order to design said connection so as to be stable and water proof, the connecting element (4) is a longitudinally extending, profiled moulded part that has an upper stripe-shaped section (5) and a lower fork-shaped section (6) which has two fork sections (7, 8), the shoe upper part (2) having a stripe-shaped upper part section (9) in its region that adjoins the sole (3), which stripe-shaped upper part section (9) is connected to the stripe-shaped section (5) of the connecting element (4), the sole (3) having a stripe-shaped sole section (10) in its region that adjoins the shoe upper part (2), which stripe-shaped sole section (10) extends between the two fork sections (7, 8) and is connected to at least one of the fork sections (7, 8).
