Abstract (en)
[origin: WO2013113339A1] The invention relates to a shoe (1), in particular a sports shoe, that has a shoe upper part (2) and a sole (3) which is connected to the shoe upper part (2), the shoe upper part (2) having two tensioning sections (6, 7) which are arranged adjacently in a tensioning region (4) and are separated by a gap (5), a fastening system (8) being present with which the shoe (1) can be fastened to the foot of the wearer of the shoe (1) by means of a fastening lace (9) as a result of the adjacently arranged tensioning sections (6, 7) being drawn towards one another. In order to improve the tension of the shoe on the foot of the wearer, the fastening system (8) comprises, in addition to the fastening lace (9), at least one strength element (12) which has at least two ends (10, 11), one end (10) of the strength element (12) being secured in the region of one of the two tensioning sections (6), the strength element (12) extending into the region of the sole (3), the strength element (12) running from the tensioning section (6) as far as the sole (3) at least in some sections in at least one guide (13) in which the strength element (12) is at least partially displaceably arranged in the direction of the longitudinal axis of the strength element (12), and a loop (14) of the strength element (12), formed in the region of the tensioning section (6), being surrounded by the fastening lace (9).
