Abstract (en)

[origin: CA2870764A1] The invention relates firstly to a method for developing a tablet dispenser, and also to a tablet dispenser (1) for the portioned distribution of tablets (35), comprising a housing (2) and a distribution part (3) which can be inserted into the housing (2), said distribution part (3) having a distribution shaft (22) and a metering part (44) that moves relative to said distribution shaft against the force of a return spring (19). In order for said return spring to be loaded in an advantageous manner, it is suggested that a tensioning part (13) is provided which, preferably in the course of inserting said distribution part (3) into the housing (2), is moved into a region of a space occupied by the non-tensioned return spring (19).
