Abstract (en)

[origin: WO2013113298A1] The invention relates to a floor/wall element (40) for securing the position of a panel, in particular a glass pane (18) of a handrail structure (10), said floor/wall element being insertable into a dimensionally stable U-shaped profiled element (22). The floor/wall element has a right wall part (44) and/or a left wall part (46) as well as a floor part (42). The floor part (42) adjoins the at least one wall part (44, 46). According to the invention, at least one target bending region (50) is provided about which the base/wall element (40) can be bent from a starting position into an approximately U-shaped installation position.
