Abstract (en)
[origin: WO2013114409A1] A lock (1) for doors that comprises a box-like body (2) provided with at least one spring latch (3) and at least one sliding latch (4) both of which can perform a translational movement from a configuration of accommodation within respective inner cavities (5), to one of protrusion from the front edge (6) of the box-like body (2). The lock (1) comprises at least one removable module (7) provided with at least one component selected from an assembly for accommodating a handle (8), a cylinder (9) that can be actuated by means of a corresponding key, a spring latch (3), and a sliding latch (4).
