Abstract (en)

[origin: WO2013113914A2] The invention relates to a barrier-free floor sill, in particular old building or renovation sill, which can be laid on a finished floor, wherein the floor sill seals an outer region of a building from an inner region or two rooms from one another in conjunction with a window or a door. The invention is distinguished in that there is provided on a basic body a first thermal separation on the inwardly directed side and a second thermal separation on the outwardly facing side of the basic body and wherein a lower closure element is arranged on the side of the basic body directed towards the floor in order to delimit an outflow duct.
