Abstract (en)

[origin: WO2013113348A1] The invention relates to a method for operating a camera arrangement for a vehicle. At least one piece of image information (12) is displayed on a surface. The at least one piece of image information (12) is changed dependent on a movement of the surface so as to at least largely compensate for the movement of the surface. For this purpose, at least two successive images are captured by a camera of the camera arrangement, and at least one reference object (16) is identified which is present in both successive images. The at least one piece of image information (12) is fixed during the movement of the surface relative to the at least one reference object (16). The invention further relates to a camera arrangement.
