Abstract (en)

[origin: WO2013116652A1] A method of associating data to an item being transported by a conveying system is described. The method includes the steps of: receiving an item into a first zone of a conveying system; receiving data associated with the item and storing the data into a first storage memory associated with the first zone; transporting the item into a second zone of the conveying system; and transferring the data stored in the first storage memory into a second storage memory associated with the second zone.
