Abstract (en)  
[origin: WO2013116620A1] A method of batch order fulfillment includes assigning a plurality of orders to a picker. Each order includes multiple units to be picked, and the picker picks the units in a logical travel sequence that generally minimizes a travel time of the picker. The method further includes assigning a new order comprising multiple units to be picked to the picker after one of the previously assigned orders is completed. The picker picks the units of the new order and unpicked units of the previously assigned orders in logical travel sequences that generally minimizes a travel time of the picker.
