Abstract (en)
[origin: WO2013113905A1] The invention relates to an identification device, comprising a portable key apparatus, which has a first memory apparatus for storing an associated identifier and a projector apparatus that is designed to project an optical code matrix based on the identifier as an image, and comprising a lock apparatus, which is designed to detect the image of the optical code matrix project by the projector apparatus by means of a sensor apparatus and to perform an image analysis of the detected image of the optical code matrix by means of an identification apparatus and, on the basis thereof, to identify the portable key device by comparing the identifier analyzed from the optical code matrix with identifiers stored in a second memory apparatus of the lock apparatus.
