Abstract (en)

[origin: EP2811094A1] Support and actuation device for coplanar sliding doors, in particular for floor and hanging wardrobes, also of reduced sizes. Device adapted to allow the displacement of the doors (6) from a closed position thereof to an opened position thereof, and vice-versa, and to allow the sliding of the opened doors onto the closed doors. Device comprising a first group of upper component parts (13), and a second group of lower component parts (14), of which the upper component parts (13) need for supporting the doors (6) allowing their sliding both in the longitudinal direction and in the transversal direction, namely in the wardrobe depth, whereas the lower component parts (14) need for guiding the sliding of the doors (6) in the same sliding directions of the upper component parts (13) and in synchronism with the same.
