Abstract (en)

The present invention relates to a cooling appliance. A cooling appliance (100) includes a main body (101), a rotatable door (102, 102'), and a hinge component (1) connecting the door and the main body. The hinge component (1) includes a hinge axis (8), an adjusting member (3) used for adjusting the height of the door relative to the main body, and a bushing (6) having at least one part accommodated in the door, where the adjusting member sits on the hinge axis. According to the recommendations of the present invention, the bushing is incapable of being rotatably sleeved outside the adjusting member relative to the adjusting member.
