Abstract (en)

[origin: EP2811399A1] The present invention discloses a method for starting a music application and an apparatus, and relates to the field of terminal technologies, which reduces a user's operation steps and improves user experience. The present invention includes: when an application is started, performing a search in an audio association information list according to identifier information of the started application, where the audio association information list refers to a list of a correspondence between an application and an audio file; and when the audio association information list includes an audio file corresponding to the started application, starting a music application in the background to play the audio file corresponding to the started application. Embodiments of the present invention are mainly applied to a process of combined use of a music application and a non-music application.
