Abstract (en)

[origin: EP2811498A1] A switch, in particular a battery cutout switch for vehicles and the like, comprising: - a housing (12) carrying at least one pair of fixed electrical contacts (22), - a contact-holder body (28) carrying at least one movable electrical contact (32) and movable between an open contacts position and a closed contacts position, and - a handle (44) rotatable relative to the housing (12) about a longitudinal axis (A) between an insertion/extraction position in which the handle (44) can be removed from the housing (12) with a movement in the direction of said longitudinal axis (A), an open position corresponding to the open contacts position of the contact-holder body (28), and a closed position corresponding to the closed contacts position of said contact-holder body (28), wherein the handle (44) is constrained axially with respect to the housing (12) in any position different from the insertion/extraction position, - a stop member (70) attachable to the handle (44) in a removable handle position or in a non-removable handle position, wherein when the stop member (70) is attached to the handle (44) in the removable handle position, the handle (44) is rotatable relative to the housing (12) between the insertion/extraction position, the open position and the closed position, and when the stop member (70) is attached to the handle (44) in the non-removable handle position, the stop member (70) limits the angular movement of the handle (44) between the open position and the closed position.
