Abstract (en)
[origin: WO2013116882A1] On a device for controlling a rail switch, comprising a tongue device with two stock rails (1, 2) and tongue rails (3, 4) assigned to the stock rails (1, 2), wherein a plurality of, in particular at least three, control devices (9, 10) are arranged offset in a rail longitudinal direction, wherein the control devices (9, 10) are mechanically coupled to one another by means of a coupling rod (16) in such a way that they are driven in an equidirectional manner, the coupling rod comprises between each two adjacent control devices (9, 10) a separate double rod made of two parallel coupling bars (19, 20), which are guided so as to be movable in the bar longitudinal direction, said coupling bars mechanically coupling the two adjacent control devices (9, 10) with one another and running between the two stock rails (1, 2).
