Abstract (en)

[origin: WO2013117533A1] According to the invention, in order to be able to produce a tubular body and an oil pan as economically as possible, the tubular body comprises a partial tubular body that extends over a first partial circumference of a tubular section and a partial tubular body complementary thereto that extends over the still free partial circumference, which partial tubular bodies have connecting surfaces that lie against each other along a separating surface that follows a course of the tubular body and are connected to each other along said connecting surfaces by means of joining.
