Abstract (en)

[origin: WO2013117412A1] The invention relates to a refrigerating device comprising an evaporator (3), comprising a fan (5) and a fan housing (11) for generating an air flow on the evaporator (3), and comprising a bearing shell (4) for retaining the fan housing (11) on the evaporator (3) in a vibration-decoupled manner. The fan housing (11) has at least one first bearing pin (13) and a second bearing pin (21). The bearing shell (4) has at least one first receiving recess (15) for receiving the first bearing pin (13) in a pivotal manner and a second receiving recess (23) for receiving the second bearing pin (21), and a pivotal locking element (30) is provided for locking the second bearing pin (21) in the second receiving recess (23).
