Abstract (en)
[origin: WO2013119839A1] A system for generating and maintaining a private talent network (PTN) is described. The system allows a company to create and maintain a branded private talent network including a live talent pool of active job seekers and potential job applicants for company positions. The system includes tools for establishing, managing and developing relations with the talent pool within a private talent network as a whole or within sub-networks (circles), such as a capability to schedule and host events of interest to candidates and a capability to communicate with candidates via such methods as video, text messaging, announcements, discussions and email. In addition, the system provides tools for segmenting the recruiting process into multiple phases where each of the interactions with each candidate during each phase is tracked and information associated with the interactions is stored.
