Abstract (en)  
[origin: WO2013117574A1] Receiving arrangement (1) designed to receive radio-frequency signals and to provide the latter after signal processing, wherein the receiving arrangement (1) comprises at least two receiving devices (2, 3) and each receiving device (2, 3) forms at least two receiving paths, characterized in that each receiving device (2, 3) has a routing unit (10), wherein the respective routing units (10) of the receiving devices (2, 3) are connected to one another via a data bus (13), and the radio-frequency signals which are converted into digital signals can be supplied, via the data bus (13) of one receiving device (2), to the at least one further receiving device (3).
