Abstract (en)
[origin: CN104233609A] The invention relates to a flat knitting machine, which comprises at least one needle bed and at least one drop-in yarn guide (11) which is movable along the at least one needle bed and is provided with a yarn guide mechanism (16) for embedding the at least one knitting yarn (15) into a needle (17) in the needle bed; and at least one feed type yarn guide (10) feeding the at least one knitting yarn (15) to the at least one drop-in yarn guide (11), wherein the two yarn guides (10, 11) can be movable jointly along the at least one needle bed so that their mutual spacing (A) can be adjusted in each movement direction (12, 13) of the yarn guides (10, 11) during the associated movement along the at least one needle bed.
