Abstract (en)

[origin: CN104309607A] The present invention relates to a method and a device for controlling a transmission, and specifically relates to a method and a device for controlling a transmission in an electric vehicle or a hybrid power vehicle. The input side of the transmission is connected with a motor of the electric vehicle or the hybrid power vehicle, and the output side of the transmission is connected with a drive shaft of the electric vehicle or the hybrid power vehicle. A desired switching operation is detected, and the current operating point of the motor is determined. The switching operation is only performed when the operating point (A) of the motor is not or no longer within a full-load range.
