Abstract (en)

[origin: WO2014198661A1] The invention relates to a strongbox (10) which comprises a storage compartment (20) and a pressure unit (100). According to the invention, the pressure unit (100) comprises a mount having a shaft (104), wherein, upon a rotation of the shaft (104) in a first direction of rotation (P2), the pressure unit (100) moves, relative to the housing (12) of the strongbox (10), in a depositing direction (P1) and, upon a rotation in a second direction of rotation (P3), moves opposite the depositing direction (P1). The strongbox (10) has a locking element (120) which, in a locking position, prevents a rotation of the shaft (104) in the first direction of rotation (P2) and, in a release position, allows a rotation of the shaft (104) in the first direction of rotation (P2). The invention further relates to a method for assembly of such a locking element (120).
