Abstract (en)

[origin: EP2814123A1] A process and the relative device for the production of coaxial cables comprising a conductor (2) housed in the hole (7) of a corresponding terminal (3) stapled onto the body of said coaxial cable (1), wherein the guided alignment is effected, of said conductor (2) with the above-mentioned hole (7) of the terminal (3). With respect to the known art described above, the process and device of the invention allow the assembly of the terminal onto the conductor, to be automated, ensuring the perfect centering between these components and considerably increasing the yield of the production process.
