Abstract (en)  
[origin: WO2013120941A1] The invention relates to a refrigeration cabinet (10), in particular a commercial refrigerator or freezer, having a housing (12), which has a front access opening (14), and a door (16), which has at least one door leaf (24), for the access opening (14), wherein the door leaf (24) has a height and a width (B) and is mounted such that it can be rotated about a vertical rotation axis (A) and can be displaced transverse to the rotation axis (A). The invention provides a guide which defines a movement of the door leaf (24) between a closed position and an open position in such a way that the pivot region of the door leaf (24) projects less than a full door-leaf width (B) into the exterior (50) in front of the access opening (14), and that the door leaf (24) is mounted such that it can be rotated about a vertical axis (A) and can be displaced transverse to the rotation axis.
