Abstract (en)
[origin: WO2013121247A1] The present invention relates to a system and a method for filling particulate material from a source container into a destination container, wherein said material is in the form of a fine particulate powder. The system comprises an air mixer funnel which allows the quick connection to an outlet opening of a particulate source container and can dispense the particulate material by creating a uniform flow that guarantees the particulate powder flowing without stacking.
