Abstract (en)  
[origin: WO2013120599A1] The invention relates to a textile light-protection material, comprising a micro-filament non-woven fabric having a surface weight of 20 to 300 g/m<sup>2</sup>, wherein the non-woven fabric comprises composite filaments that are melt-spun and plaited as a non-woven fabric having a titer of 1.5 to 5 decitex and the composite filaments are split into at least 80% of elementary filaments having a titer of 0.05 to 2.0 and are solidified, and wherein the elementary filaments have at least one crystallization auxiliary means selected from titanium dioxide, silicon dioxide, magnesium silicate hydrate, in particular in the form of talcum and/or aluminum silicate, in particular in the form of kaolin, in each case in an amount of 0.2 to 5 wt%.
