Abstract (en)
[origin: WO2013113996A1] The invention relates to a method and an arrangement for lifting a structure. A hollow pipe (4) is arranged at the lifting point of the structure to be lifted. A bond is generated between the hollow pipe (4) and the structure to be lifted by injecting polymer (9) to the outside of the hollow pipe (4). A supporting bar (10) is arranged in connection with the hollow pipe (4), and it is arranged in the ground (2) such that it is there in a substantially non-subsidable manner. The hollow pipe (4) and the structure attached to it via said bond are lifted in relation to the supporting bar (10) and such that they are supported against the supporting bar (10).
