Abstract (en)
[origin: WO2013120868A1] The invention relates to a mobile sealed building comprising a plurality of adjacent contiguous sections comprising a metal frame, at least one piece of tarp, and means for connecting to the ground, each end of the frame of a section comprising an end beam which is capable of being connected to an end beam of an adjacent section by a securing means, characterized in that the securing means sealingly and immovably connects said two end beams of two adjacent sections and is capable of being dismantled so as to enable the separation of said two sections, and in that the building comprises a means for controlling and driving the securing means, which is arranged apart from the securing means.
